INDIVIDUAL PROJECT
Abstract Code

ADMIN
Log In (functionality not yet available, but here's my thought process for how it would work)
- Admin User enters Username and Password into login form
- IF the Username follows the following format: both fields not empty, Username contains all valid characters, Password contains anything except an escape string - THEN when the login button is clicked:
    - IF user record is found but the Users Password != to $Password
        - Users receives an error and is redirected to Login form again
    - ELSE
        - Store the Users login information as a session variable '$uid'
        - IF the Users role = Admin
            - Store the Users login information as a session variable with 'yes' in session variable '$isAdmin'
        - ELSE
            - Store 'no' in session variable '$isAdmin'
        - Redirect to the Users Menu page
- ELSE Username and Password values are invalid, and an error message is displayed on the login form

CREATE RESUME JOB
- User is logged in as an Admin on the home page
- User clicks 'Add to Resume' in top navigation bar
- 'Add to Resume' page is displayed
- User then inputs information into all available fields
- IF any information field values are not empty THEN:
    - User clicks submit button:
        - Resume information is stored in database
        - User is redirected to the home page
- ELSE resume information fields have invalid entries and display an error message

READ RESUME
- User is logged in as an Admin on the home page
- User clicks 'Edit Resume' in top navigation bar
- Resume Job submissions are then displayed on screen

UPDATE RESUME JOB
- User is logged in as an Admin on the home page
- User clicks 'Edit Resume' in top navigation bar
- Resume Job submissions are then displayed on screen
- User identifies which Resume entry to update

- IF UPDATE button is clicked, THEN:
    - Submission form to edit that entry is displayed
    - User updates the appropriate fields
    - When the update button is clicked:
        - Store Resume information
        - User is redirected to home page
    - ELSE submission fields invalid, display error message

DELETE RESUME JOB
- User is logged in as an Admin on the home page
- User clicks 'Edit Resume' in top navigation bar
- Resume Job submissions are then displayed on screen
- IF DELETE button is clicked, THEN:
    - Submission clicked on is deleted
    - User is redirected to home page

CREATE PORTFOLIO JOB
- User is logged in as an Admin on the home page
- User clicks 'Add to Portfolio' in top navigation bar
- 'Add to Portfolio' page is displayed
- User then inputs information into all available fields
- IF any information field values are not empty THEN:
    - User clicks submit button:
        - Portfolio information is stored in database
        - User is redirected to the home page
- ELSE portfolio information fields have invalid entries and display an error message

READ PORTFOLIO
- User is logged in as an Admin on the home page
- User clicks 'Edit Portfolio' in top navigation bar
- Portfolio submissions are then displayed on screen

UPDATE PORTFOLIO JOB
- User is logged in as an Admin on the home page
- User clicks 'Edit Portfolio' in top navigation bar
- Portfolio submissions are then displayed on screen
- User identifies which Portfolio entry to update
- IF UPDATE button is clicked, THEN:
    - Submission form to edit that entry is displayed
    - User updates the appropriate fields
    - When the update button is clicked:
        - Store Portfolio information
        - User is redirected to home page

- ELSE submission fields invalid, display error message

DELETE PORTFOLIO JOB
- User is logged in as an Admin on the home page
- User clicks 'Edit Portfolio' in top navigation bar
- Portfolio submissions are then displayed on screen
- IF DELETE button is clicked, THEN:
    - Submission clicked on is deleted
    - User is redirected to home page
